development; groundbreaking innovations will come to light in the years to come. To hold the pace of development we need to experiment more across disciplines and sectors in our search for new and more effective ideas for a sustainable future. Educational institutions must continue to develop their programs, so that students, from the grass-root level, can meet and deal with the modern societal needs. The development of entrepreneurial competencies in our education is becoming increasingly important; these competencies can only nestle in a dynamic innovation ecosystem where educational institutes, the private and public sector work together. In this webinar, we will discuss how to nurture innovative ideas to innovations, how to protect novel thoughts, make innovations useful to society, and how educational institutions from the base level to the highest can contribute to the process of continuous research and sustainable development. We believe further, the discussion will shed light on how to make use of new and future technologies in a world of globally competitive markets, ultimately leading to a highly competent, skilled, and energetic youth workforce. Summary: The Covid-19 pandemic has affected the connections between HEIs and their ecosystems, economy, manufacture sector, and social relations Many HEIs have reorganised their activities, to face the new challenge. Teaching has been moved on-line. A stronger link between basic and applied research has emerged, due to the pressing need to respond to the health crisis. HEIs have found new ways to support and collaborate with their local communities and

Website: www. gourmaha.org

national governments. Going forward, HEIs may need to better understand the language and needs of firms of different sizes and ages. A better understanding of the business environment can help improving teaching to provide students with flexibility, autonomy, accountability, and – more in general – with a “learning-to-learn” attitude. All HEIs, in all sectors and fields, need to embrace a digital paradigm, which should orient their missions and activities. Entrepreneurial, innovative and digital HEIs can collect granular information and generate data flows (while respecting privacy) and, in reverse, providing individuals with tailored information and learning opportunities. Knowledge exchange and collaboration activities are multidimensional and encompass other dimensions, besides business. HEIs have been playing a pivotal role to move forward the Agenda 2030. The capacity to create interdisciplinary platforms and holistic planning is key to handle the pandemic and it will be important also in the “regeneration” phase, to promote sustainable development and inclusion, in all ecosystems once the pandemic is over or under control.

In general, there is a need for place responsiveness in HE systems and policies. Entrepreneurial and innovative HEIs could become hubs within territorial networks generating information, skills and support for policies, including sustainable, smart, regional development and well-being.

The Key speaker of the webinar was Prof. R. B. Singh Secretary-General, International Geographical Union (IGU); Member, International Science Council (ISC); Chairman, CSIR-CFTRI, Mysuru; Member, Vision India 2035, Niti Ayog; Former Professor & HOD, Department of Geography, Delhi School of Economics, University of Delhi, INDIA.

IMPACT

Generally organized for either a single day or couple of days, the prime objective of seminars and workshops is to assemble the like-minded intellectuals and professionals to trade ideas, thoughts, and views related to a specific topic.

Proficiency in Verbal Communication: Most of the young graduates lack the confidence and fluency while interacting verbally. Coming either from rural or sub-urban background, many students hold good academic record and industrial skills but lack behind while expressing themselves. Speaking about a researched topic in seminars and workshops before a gathered audience boosts the confidence of the students preparing them precisely for interviews and group discussions.

Acquirement of Knowledge in a Particular Field: Seminars and workshops provide a chance to interact with experts from the specific field. Discussing about the relevant topics of the particular subject, students tend to learn about the latest information and new skills related to the concerned subject. As a result of genuine interest shown by the students to know and learn about the subject, they research about the particular topic with the help of expert guidance and land in their conclusion after a careful investigation, experiment, and simulation.

Growth in Networking: In seminars and workshops the students and faculties from different educational institution join to take part. Meeting new people can help the students in getting guidance and solutions related to common problems. Making new friends can not only encourage new ways of thinking and learning but might open up new opportunities as well. Even after the

completion of seminar or workshop programs, these chains of networking can help the students in escalation of their professional life.

E-mail : gour_maha@yahoo.co.in
Website: www. gourmaha.org

Encouragement and Motivation: Talking and learning about a new topic will encourage the students to explore new areas relevant to the topic. Students will feel motivated to research and learn new things. With proper guidance from teachers and experts, students feel motivated to publish their own research journals, contributing significantly to the education sector.

A Different Environment than Classroom: In a learning environment different and unique from classrooms, students learn more effectively and efficiently. Far from the textbooks and academic syllabuses, students research and learn on their own which boost their confidence, performance, and productivity.

6.Teachers:While seminars/workshop/conference provide opportunity to reorient teachers on emerging fields of studies, seminars /webinars also help teachers to adapt cutting edge technologies in teaching and learning. Webinars/Seminars improve the research potential of teachers.
