About the

webinar India holds the world's largest youth power which makes the whole world eyeing India as a source of skilled & technically advanced manpower. Presently our society is going through restructuring processes in all aspects. The ability to develop and take advantage of new technologies, as well as understanding how technology and society interact, are all critical factors that universities can contribute to in this ongoing process of a societal shift. Besides, sustainable development is imperative for our future, with sustainable development; groundbreaking innovations will come to light in the years to come. To hold the pace of development we need to experiment more across disciplines and sectors in our search for new and more effective ideas for a sustainable future. Educational institutions must continue to develop their programs, so that students, from the grass-root level, can meet and deal with the modern societal needs. The development of entrepreneurial competencies in our education is becoming increasingly important; these competencies can only nestle in a dynamic innovation ecosystem where educational institutes, the private and public sector work together.

In this webinar, we will discuss how to nurture innovative ideas to innovations, how to protect novel thoughts, make innovations useful to society, and how educational institutions from the base level to the highest can contribute to the process of continuous research and sustainable development. We believe further, the discussion will shed light on how to make use of new and future technologies in a world of globally competitive markets, ultimately leading to a highly competent, skilled, and energetic youth workforce.
